Text AutoText provides text objects that can be created, moved, edited, and saved in the drawing table. Vector AutoCAD adds the ability to create and edit three-dimensional objects and associated surfaces using a 2D editor, the 3D Modeling tab, and 3D Modeling Tools. Objects are modeled in the 3D world by editing edges and vertices. After editing, 3D modeling tools are used to define the 3D surface model. The 3D Modeling Tools add 3D features such as wireframe modeling, chamfer, fillet, and bevel to objects. These features are implemented in AutoCAD's 3D Design and Drafting Toolbox. In earlier versions, AutoCAD used the VDEX protocol to coordinate its vector drawing activities with the Model-View-Controller (MVC) systems of third-party CAD applications. In Autodesk 2019, AutoCAD uses its own new data model, called the Dimensional Modeling Language (DML), as a native extension of the file format. Features such as variable text, automatic dimensioning, and dynamic text and dimension updates are provided by the "Dimensional Modeling Language" (DML) file format extension for AutoCAD. The AutoCAD User Reference Manual (2018 release) defines AutoCAD's object-modeling abilities as follows: See also Autodesk 3ds Max, an Autodesk 3D modeling application.
