By the early 1990s, the use of computers in both design and drafting, as well as the integration of CAD applications with other design software, had increased. At the same time, computer technology was starting to make its way to the desktop through the Personal Computer (PC). This transition, along with AutoCAD's success, made the program a standard in the industry. Other than Adobe Illustrator, Autodesk's other major competitor for desktop CAD, at the beginning of the 21st century, Autodesk's market share had surpassed that of all other desktop CAD software packages combined. In 2018, Autodesk claimed a $3.7 billion CAD market share, with three out of every four CAD users using AutoCAD. Since then, Autodesk's market share has continued to grow. For instance, in September 2018, Autodesk claimed a CAD market share of 97% (the most recent available statistic). While the growth of Autodesk's CAD market share is impressive, it is due largely to the advances in technology and the reduced cost of running CAD software. At the beginning of the 21st century, CAD software was expensive, on the order of a few hundred dollars per year. This was largely due to the powerful, custom-built computers that were necessary to run the software, coupled with the high cost of the sophisticated graphics chips and software necessary to display graphics. Today, CAD software is available on a variety of hardware platforms, including desktops, laptops, and mobile devices. AutoCAD's growth over the past 30 years has been driven by its improvements to ease of use, efficiency, and connectivity. In 2018, the only hardware platform that is not capable of running AutoCAD is the Nintendo Switch. This article is the second part of a two-part article series. To read the first part, click here. This article will focus on CAD. The purpose is to provide a basic introduction to the context of CAD change, highlighting the features and trends to watch for and the reasons for that change. The growing importance of cloud computing has already had a profound effect on the entire CAD industry, as
